

NAVED A. SAYYED

React Native Developer | Cross-Platform Mobile Engineer (Android & iOS)

Nashik, Maharashtra | navedas9356@gmail.com | LinkedIn | GitHub | Portfolio | +91 9356559922

HIGHLIGHTS

- Computer Engineering undergraduate (SGPA: 9.4, 2026) specializing in **React Native (CLI & Expo)**, **TypeScript**, and modern **JavaScript**, focused on building **high-performance, scalable cross-platform** mobile applications with production-grade architecture and efficient **REST API integration**.
- Proven experience in developing **production-ready mobile** and **full-stack applications** with real-time features, offline support, and scalable backend systems, supporting **1,000+ users** while ensuring UI **responsiveness, performance optimization, reliability**, and **clean, maintainable** code.

SKILLS & TECHNOLOGIES

- **Mobile Development:** React Native (CLI, Expo), APK Build, Signing & Deployment, Push Notifications, Native Modules (Android/iOS)
- **UI & Navigation:** React Navigation (v7+), Responsive UI, Performance Optimization
- **Frontend:** React.js, Next.js, HTML5, CSS3
- **State Management:** Redux Toolkit, Context API, Zustand
- **Backend & APIs:** Node.js, REST APIs, API Design & Integration, Authentication
- **Database & Backend Services:** MongoDB, Supabase, Firebase
- **Authentication & Security:** JWT-based authentication, secure storage, API security fundamentals
- **Testing:** API (Postman), Jest (Unit Testing), React Native Debugging
- **Tools & Development:** Git, GitHub, CI/CD (GitHub Actions)
- **Programming Languages:** JavaScript (ES6+), TypeScript

PROFESSIONAL EXPERIENCE

11 BRD, INDIAN AIR FORCE - Aerospace Maintenance & Production Unit

Technical Intern | OJHAR, Maharashtra | December 2024 – January 2025

- **Automated Excel-based maintenance** and reporting systems, improving component tracking by **40%**, reducing manual work by **50%**, and cutting reporting errors by **30%**.
- Collaborated with Air Force engineers to enhance monitoring of electronic aggregates and improve production visibility for better operational decisions.

COSA-GCOERC

Technical Head | GCOERC, Nashik | Jun 2024 – Aug 2025

- Developed the COSA event platform (cosagcoerc.com) using **React.js**, used by **1,000+ students** for TechGuru 2025 registrations, reducing manual effort by 60% and improving operational efficiency by 40%.

PROJECTS

1) Snap2Fix – Smart Complaint Management System (*React Native CLI, TypeScript, Supabase, Firebase FCM, Notifee, React Navigation v7, Reanimated*)

- Developed a production-grade cross-platform mobile application using React Native (CLI) with TypeScript for Android & iOS, enabling real-time complaint tracking and role-based workflows. Implemented pixel-perfect UI using React Navigation (v7+), Reanimated, and optimized components for smooth user experience.
- Integrated Supabase (PostgreSQL) for backend services with real-time subscriptions and AsyncStorage for local persistence. Built push notification system using Firebase Cloud Messaging (FCM) and Notifee.
- Implemented QR-based complaint logging using Camera Kit, media upload via Image Picker, and ensured secure data handling with permission management.
- Developed a complementary web platform (Next.js) for end users and admin dashboards, enabling full end-to-end system functionality.

- Built and deployed production-ready APKs using CI/CD pipelines (GitHub Actions), enabling automated build and deployment workflows. | **Live Demo** | **APK** | **Portfolio** |

2) LokalMusic – Music Streaming Application (React Native Expo, TypeScript, Zustand, Expo AV, Axios, AsyncStorage)

- Built a high-performance music streaming mobile application using React Native (Expo) with TypeScript, supporting streaming, offline downloads, playlists, lyrics, and background playback.
 - Implemented Zustand for state management with persistence, AsyncStorage for caching, and optimized API calls using Axios for efficient data fetching.
 - Integrated Expo AV for audio playback and File System for offline storage. Enhanced UI responsiveness using React Native Reanimated and Gesture Handler for smooth animations and interactions.
- | **GitHub Repo** | **APK** | **Portfolio** |

3) Grievance Resolver – AI-Powered Citizen Complaint System (FastAPI, LangChain, LangGraph, React,)

- Developed a full-stack AI-powered grievance management system with real-time complaint handling and automated workflows. Built a responsive frontend using React and integrated REST APIs with a FastAPI backend for scalable data processing.
- Implemented intelligent automation using multiple AI agents for classification, sentiment analysis, SLA assignment, and escalation, improving response efficiency. Designed a modular and scalable architecture supporting multilingual chatbot interaction and real-time updates.
- Collaborated across frontend and backend components to ensure smooth data flow, system reliability, and optimized performance. | **GitHub Repo** | **Live Demo** | **Portfolio** |

4) MenuForge – Digital Menu Management System (React Native CLI, TypeScript, Appwrite, React Navigation v7, Context API)

- Developed a cross-platform restaurant management mobile application using React Native (CLI) with TypeScript, enabling menu management, QR code generation, and PDF-based digital menus.
- Implemented backend integration using Appwrite with secure data handling and AsyncStorage for local persistence. Built responsive UI using React Navigation (v7+) and optimized user workflows.
- Integrated features like image upload, QR code generation (react-native-qrcode-svg), sharing, and PDF generation to enhance real-world usability for restaurant operations. | **APK** | **Portfolio** |

5) Blood-O – Blood Donation Management System (React, TypeScript, Supabase, TanStack Query)

- Built a scalable full-stack web application enabling real-time donor registration, request tracking, and admin management. Developed responsive UI components and integrated Supabase backend with RESTful APIs for real-time data synchronization.
- Optimized data fetching and caching using TanStack Query to ensure fast performance and smooth user experience under concurrent usage. Implemented secure authentication and efficient state management for reliable system operation. | **GitHub Repo** | **Live Demo** | **Portfolio** |

EDUCATION

Savitribai Phule Pune University, Nashik, MH | SGPA: 9.4
Bachelor of Computer Engineering
