ABOUT ME

Mobile developer specializing in React Native (CLI and Expo) with hands-on experience translating Figma designs into pixel-perfect, component-based applications. Proficient in JavaScript/TypeScript, NativeWind, React Navigation and performance optimization to ensure smooth functionality. Demonstrated ability to automate processes and enhance tracking systems, reducing manual work by 50% and improving operational insights.

SKILLS & TECHNOLOGIES

- **Mobile Development:** React Native (CLI, Expo), APK Build, Signing & Deployment, Push Notifications, Native Modules (Android/iOS)
- **UI & Navigation:** React Navigation (v7+), Responsive UI, Reanimated, Gesture Handler, Performance Optimization
- **Frontend:** React.js, Next.js, HTML5, CSS3
- **State Management:** Redux Toolkit, Context API, Zustand
- **Backend & APIs:** Node.js, REST APIs, API Design & Integration, Authentication (JWT/OAuth)
- **Database & Backend Services:** MongoDB, Supabase (PostgreSQL), Firebase
- **Tools & Development:** Git, GitHub, CI/CD (GitHub Actions), Postman, Jest
- **Programming Languages:** JavaScript (ES6+), TypeScript

PROFESSIONAL EXPERIENCE

11BRD, INDIAN AIR FORCE - Aerospace Maintenance & Production Unit | *Technical Intern* Dec 2024 - Jan 2025

- Streamlined Excel-based maintenance and reporting systems, improving component tracking by 40%, reducing manual work by 50%, and cutting reporting errors by 30%.
- Collaborated with Air Force engineers to enhance monitoring of electronic aggregates, improving production visibility and enabling data-driven operational decisions.

COSA-GCOERC | *Technical Head* Jun 2024 - Aug 2025

- Developed the COSA event platform (cosagcoerc.com) using React.js, Redux Toolkit, and CSS3, implementing a responsive UI for 1,000+ students and deploying via GitHub Actions to reduce manual effort by 60% and improve operational efficiency by 40%.

PROJECTS

Snap2Fix – Smart Complaint Management System | [Live Demo](#) | [APK Download](#)

- Built a production-ready Android & iOS app in TypeScript with three role-based panels, translating Figma designs into pixel-perfect UI using NativeWind, and integrating real-time complaint tracking, QR-based logging, media uploads, and smooth Reanimated animations
- Supabase (PostgreSQL) backend with real-time subscriptions, AsyncStorage for offline persistence, and Firebase FCM + Notifee for push notifications with permission management.
- Separate Next.js web platform for citizens to submit and track complaints, forming a complete end-to-end system and automated APK releases via GitHub Actions CI/CD.

LokalMusic – Music Streaming Application | [GitHub Repo](#) | [APK Download](#)

- Built a full-featured music streaming app (Android & iOS) based on Figma designs, delivering a Spotify-like experience with online streaming, offline downloads, playlists, lyrics display, and background playback using React Native Expo and TypeScript
- Zustand for persistent state management, Expo AV for audio engine, AsyncStorage + File System for offline storage, and Axios for optimized API calls with efficient data fetching.
- Optimized app performance and ensured smooth functionality by applying React Native performance techniques, leveraging Reanimated and Gesture Handler for native-feel animations and fully responsive layouts

Grievance Resolver – AI-Powered Citizen Complaint System | [GitHub Repo](#) | [Live Demo](#)

- Built an AI-powered multi-agent grievance resolution system using **LangGraph & LangChain**, where 9 agents automate classification, sentiment analysis, routing, SLA assignment, and escalation for end-to-end complaint handling.
- Built a **React 18 frontend** with real-time tracking, multilingual voice-enabled chatbot, and heatmap visualization; integrated with a **FastAPI backend** using a modular agent pipeline and secure Supabase data handling.

MenuForge – Digital Menu Management System | [GitHub Repo](#) | [APK Download](#)

- Cross-platform restaurant app (Android & iOS) for complete menu management create, edit, and organize menus with image uploads, QR code generation, PDF export, and one-tap sharing.
- Appwrite backend with secure authentication, AsyncStorage for offline persistence, and React Navigation v7 for smooth, responsive UI flows across all screen sizes.

Blood-O – Blood Donation Management System | [GitHub Repo](#) | [Live Demo](#)

- Full-stack web app with real-time donor registration, request tracking, and admin panel.
- TanStack Query for optimized caching; secure Supabase authentication.

EDUCATION

Savitribai Phule Pune University

Bachelor of Computer Engineering, Computer Engineering (SGPA: 9.4)
